

I am a full-stack developer with strong expertise in React, Next.js, Node.js, TypeScript, SQL, and DevOps practices, and I am excited to apply for the Frontend Engineer position. With almost five years of building web and mobile applications, I have gained advanced technical skills as well as leadership and collaboration experience that consistently drive high-impact results.

In my most recent role, I led a team developing a municipal management application for web and mobile. I coordinated sprints, conducted code reviews, and ensured the quality of critical features. Previously, at Insoft Omni, I worked independently on both the front- and back-end of an online support platform, delivering stable integrations with messaging APIs such as WhatsApp, Twilio, and Meta. These experiences sharpened my ability to own complex projects end-to-end and to communicate solutions effectively across multidisciplinary teams.

My background also includes React Native development for mobile apps, real-time integrations using WebSockets, and solid database experience with MySQL and PostgreSQL. Beyond the technical side, my degree in Linguistics and earlier career as an ESL teacher strengthened my communication, organization, and adaptability—qualities that enhance team onboarding and cross-functional collaboration.

I am enthusiastic about the opportunity to contribute by building scalable, high-performance products. I would welcome the chance to discuss how my skills can add value to your team.

Thank you for considering my application.
